

## Now available: New Web Interface for the OSIG Article

The Lenovo Server [Operating System Interoperability Guide](#) (OSIG) is the official resource for information about which operating systems are supported on Lenovo servers. It was first published in PDF form about 12 months ago and so far has been downloaded more than 26,000 times.

To make the guide even easier to use, we have now replaced the PDF format with a new web-based application that you can able to access from your desktop browser or from a phone or tablet. It provides search and filtering mechanisms to quickly locate the information you need.

The new OSIG web application is now live: <http://lenovopress.com/osig>

### The web interface

The new web interface is at the same URL you use previously used to get the PDF version: <http://lenovopress.com/osig>. Even the [long form URL](#) will redirect to this URL, so there is no need to change your bookmarks.

When you first go there you'll see this page:

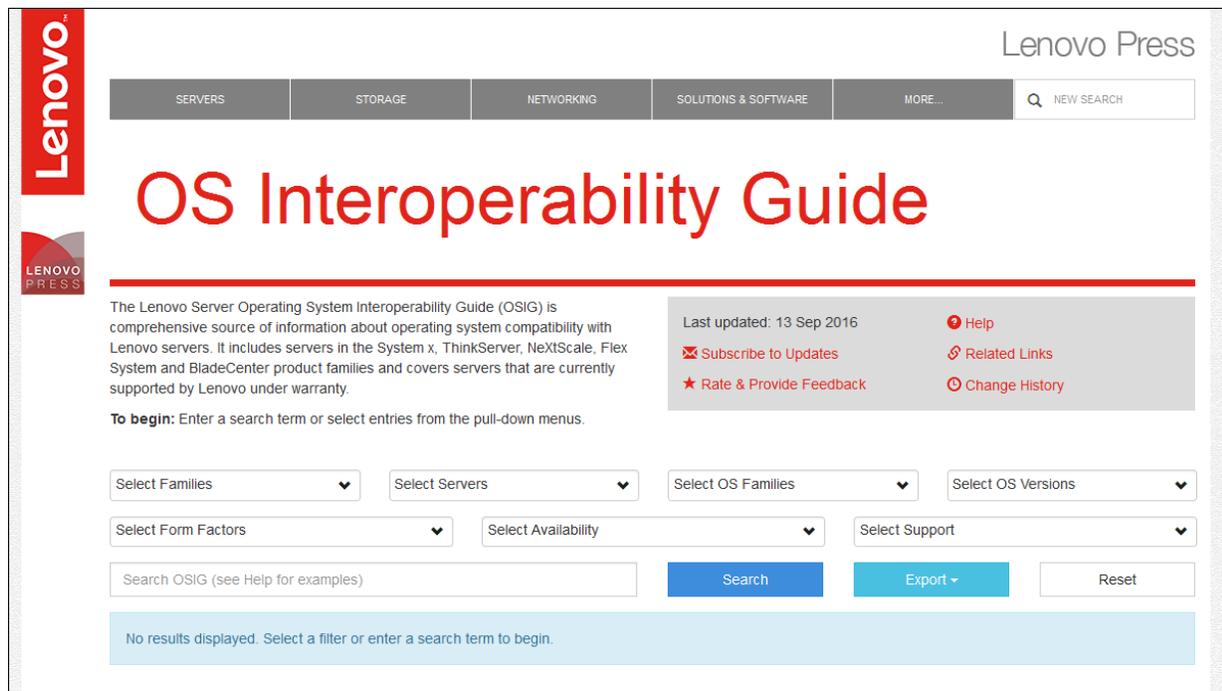

Figure 1. The OSIG web interface when you first begin

The body of the page is a series of dropdown menus, a search field, and some buttons. Characteristics of these menus:

- You can select them in any order and use as many (or as few) as you want
- You can select more than one item in a menu
- You can select from the menus with the mouse or you can type in the field to select items
- As you select from a menu, the other menus will automatically adjust to show only valid combinations
- Each time you select something from the menus, the results will be displayed immediately, just below the fields and buttons
- You can use the search field either by itself or in conjunction with the dropdown menus to further refine your search
- Press Reset to clear all selections and start again

The dropdown menus allow you to filter through the search results, and are as follows

- Select Families: System x, ThinkServer, NeXtScale System, Flex System and BladeCenter.
- Select Servers: These are all the individual servers in each of the families.
- Select OS Families: Chose from Windows, RHEL, SLES, VMware ESXi and others.
- Select OS Versions: These are the major releases of the OS.
- Select Form Factor: Not sure what server or family you want to filter on? You can start with 2-socket rack servers, for example.
- Select Availability: Filter on servers currently available or withdrawn from marketing.
- Select Support: Select from Supported, Certified or Tested.

Here's an example that shows what versions of RHEL 6 are supported on the x3650 M5 (8871, E5-2600 v4):

Server Family	Form Factor	Server	Server Availability	OS Specific Version	Support Statement
System x	Rack 2S	x3650 M5 (8871, E5 v4)	Available	RHEL 6.7 x64	Supported & Certified
System x	Rack 2S	x3650 M5 (8871, E5 v4)	Available	RHEL 6.8 x64	Supported & Certified
System x	Rack 2S	x3650 M5 (8871, E5 v4)	Available	RHEL 6.0 32-bit	None

Figure 2. Showing which versions of RHEL 6 are supported on the x3650 M5

Another example of use is wanting to know what currently available two-socket rack servers are certified with Ubuntu 16:

Select Families ▼    Select Servers ▼    Ubuntu Server x ▼    Ubuntu 16 x ▼

Rack 2S x ▼    Select Availability ▼    Select Support ▼

Search OSIG (see Help for examples)    Search    Export ▼    Reset

34 Matching Records

Server Family ▼	Form Factor ▼	Server ▼	Server Availability ▼	OS Specific Version ▼	Support Statement ▼
System x	Rack 2S	x3550 M5 (5463, E5 v3)	Available	Ubuntu 16.04 LTS 64-bit	Certified
System x	Rack 2S	x3550 M5 (8869, E5 v4)	Available	Ubuntu 16.04 LTS 64-bit	Certified
System x	Rack 2S	x3650 M5 (5462, E5 v3)	Available	Ubuntu 16.04 LTS 64-bit	Certified
System x	Rack 2S	x3650 M5 (8871, E5 v4)	Available	Ubuntu 16.04 LTS 64-bit	Certified

Figure 3. Showing which 2S rack servers are Certified with Ubuntu 16.x

## Details popup window

In each of the search results above, the support statement column contains clickable links. Clicking the link opens a popup window with details about the support.

Detail ✕

**Server family:** System x  
**Form factor:** Rack 2S  
**Server:** x3650 M5 (8871, E5 v4)  
**Processors:** Intel Xeon processor E5-2600 v4 family up to E5-2699 v4  
**Server availability:** Available

**OS Family:** Red Hat Enterprise Linux  
**OS Version:** RHEL 6.7 x64  
**Support:** Supported & Certified

**Support definitions**

**Supported:** Lenovo provides hardware / OS interoperability support on Lenovo servers. Lenovo validates selected products for compatibility with Lenovo servers and works with third-party vendors to test their equipment with ours.

**Certified:** Server has met the OS Partner Certified/Logo program requirements. OS vendor provides OS support. Lenovo only provides hardware level support, and works with the hardware partner and OS vendors to close any compatibility issues customers may experience with their installation. Lenovo will work with the OS provider to submit hardware compatibility (HCL) test suite results so that the supported solution can be posted to the respective OS providers HCL site.

Figure 4. Details popup window

In the details popup window you'll find the following information:

- Summary of the server and OS selected
- Definitions of the support statements
- Related links:
  - The vendor HCL page showing the certification for this server
  - The Lenovo Press product guide for the server
  - The support page for this server to download drivers and user guides
  - The ServerProven page for the server listing options
- Additional support notes or restrictions (if any)

## Export function

Back on the main page, the Export button offers these choices:

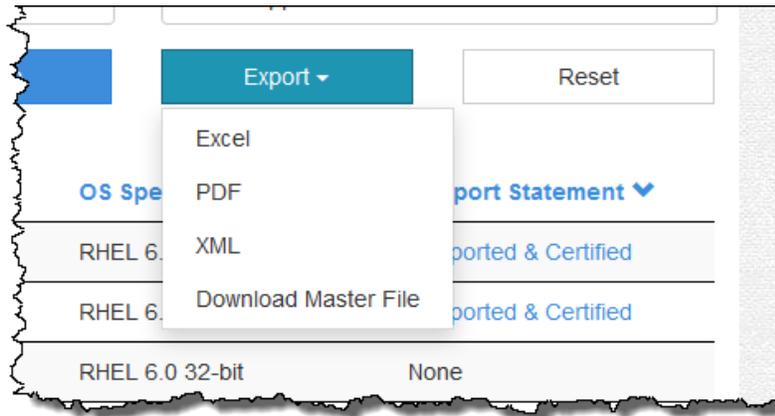

Figure 5. Export button

The functions available here are as follows:

- Export to Excel: Gives you an XLS file with the results you have displayed. Useful if you want to insert as a table into a document.
- Export to PDF: Gives you a fully formatted PDF of your search results.
- Export to XML: Do you manage a web site with content about Lenovo servers? With this XML file you can use the OSIG API to generate real-time OS data and display it on your web site. Great for business partners!
- Download Master File: If you need to work offline or perform more complex filtering on the complete OSIG dataset, then you can download this 11,000+ row spreadsheet file.

## Additional information

At the top of the OSIG page is a grey box with additional information:

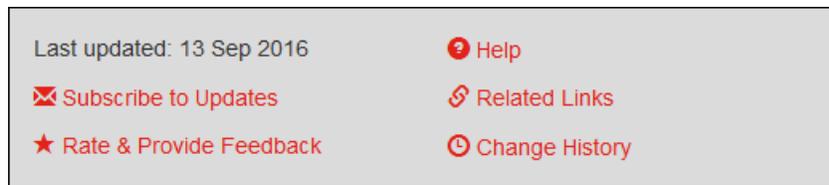

Figure 6. Additional information box

Here you will have access to the following functions:

- Subscribe to updates: Enter your email address and we'll send you an automated email whenever we make updates to the OS compatibility data (e.g., new support or new certification).
- Rate and provide feedback: Have comments or a suggestion about OSIG? Send it to us here!
- Help: Guidance on how to use the OSIG.
- Related links: Here we list links to OS vendor web sites and other useful web resources.
- Change history: We keep the OSIG data up-to-date. This page shows you all the changes made.

## Related product families

Product families related to this document are the following:

- [Microsoft Windows](#)
- [Red Hat Enterprise Linux](#)
- [SUSE Linux Enterprise Server](#)
